

Hardware

AFIX Mobile ID Systems include the following or equivalent hardware:

**Compact WiFi
and Bluetooth-enabled
Handheld Mobile
Fingerprint Scanner**

Integrates with customer-provided smartphone device or notebook computer to search remote data stores.

Proven Deployments

“During the last six months our officers identified over 800 subjects using mobile identification technology. One hundred and twelve of those subjects were arrested for giving false information to a police officer or for outstanding warrants.

Lt. Jeffery A. Rose

San Bernardino County,
CA Sheriff's Dept.

Hundreds of Mobile Identification units have been deployed with demonstrated time and cost savings through cite outs, remote bookings, increased arrests and solved crimes.

AFIX Technologies' newest AFIX Mobile ID solution empowers a compact, robust handheld device that links via Bluetooth to a compatible customer-supplied, preconfigured smartphone or a notebook computer. The flexibility provided by the AFIX Mobile ID system through its forensic quality fingerprint device with auto-capture capability, and the interface with the high-quality camera on the connected smartphone ensure accurate identifications and significant time savings for officers in the field, all of which translate into cost savings for your agency.

More Accurate Identifications

- AFIX Mobile ID captures forensic quality fingerprint images for transmission to remote AFIX Tracker databases for fast search and accurate identification of unknown subjects.
- No reliance on name and/or DOB data, or any other verbal information provided by the subject.
- Delivers real-time ID information for on-the-spot decision making.
- Helps prevent false arrests and/or releases.

Flexibility to Meet Your Agency's Needs

- AFIX Mobile ID utilizes the latest smartphone (Android 2.3) and wireless communications technologies (3G, 4G).
- Works with a wide variety of Android devices from your choice of cellular service provider (contact us for the most up-to-date specification requirements.)
- Can leverage your agency's existing cellular service to avoid redundant fees.
- Provides rapid response through integration with your agency's existing AFIX search network, which may be easily scaled to meet the performance demands of a growing database.
- Avoids logistical and spatial challenges of integrating expensive and bulky cradles in squad cars.

Secure Data Transmission

- AFIX Mobile ID provides secure Internet communication via SSL, with additional 256-bit AES encryption of sensitive data for an exceptional degree of security.
